Dédalo publication correspondences

Dédalo sections are resolved and published to target publication element (database, rdf, ec.) based on publication structure map configuration. You can get info about this schema in API 'tables_info' call

Dédalo backend   **Publication element (db..)**

oh1 → interview

rsc167 → audiovisual

ts1 → T. thematic

on1 → T. onomastic

... → ...

Publication component

Set current section record as public or not. If activated, when user makes a single record publication or multiple section publication, this record is included to publish.
If is not activated, this record will be deleted in the next publication action.
NOTE: Only to set the publication on green NOT publish nothing. Only when user press the special button "Web Publication" the record/s is published.

Multiple publication (list mode)

Publication button

Edit mode: Publish (copy to public database or publication element) only current record.
If publication component is set to off, this record is removed in target publication element (if exists).

Publication button

List mode: Publish (copy to public database or publication element) all viewed records (you can make a search to reduce the number of records to publish) respecting publication component value, in the same way as individual but massively
